

April 2010 – New Packaging Scheme for Diode Pumped Products

Lee Laser has a new look! “We’ve made significant advances in our technology and have expanded the applications for our products over the past several years. We felt it was time to update the outside of the laser to reflect the changes we’ve made on the inside” says Don Bishop, President of Lee Laser.

Rounded corners, brighter colors, and a sleek industrial look was chosen by the design team at Lee Laser to help tell the story of the advances made to the inside of the laser.

Below is a comparison of before and after:
