

## Non-Authorized Laser Diode Arrays

Lee Laser has learned of replacement Laser Diode Arrays for Lee Laser Series LDP lasers that now are offered on the open market. **These replacement Arrays are not approved by Lee Laser.** They do not contain approved diodes, and Lee Laser has not approved the use of these diode Arrays for replacement in any of our products.

To open and service the Diode Modules requires special skills that have been developed at Lee Laser. Only Lee Laser employees are authorized to open the Diode Modules for repair or replacement of the Diode Arrays or any other parts. Lee Laser has not authorized any individual or organization outside of Lee Laser to perform this repair service. The Lee Laser Diode Modules are sealed to prevent unauthorized service. If the seal is broken for any reason by unauthorized personnel, all responsibility for warranty, laser performance, diode lifetime and service of any part of the laser reverts from Lee Laser to the company or individual that sells or performs these unauthorized modifications.

When Lee Laser performs repair services on the Diode Modules, there are components other than the diode Arrays that must be replaced. These components are not available on the open market, but only from Lee Laser. Without the replacement of these other internal components, performance of the Diode Module and lifetime of the laser diodes will suffer when the Diode Module is returned to service.

Diode Modules that are rebuilt by Lee Laser bear a minimum one-year warranty.
